CONFIDENTIAL · CLIENT REPORT

Performance Analytics Appendix

Audit Detail and Metrics · April 2026

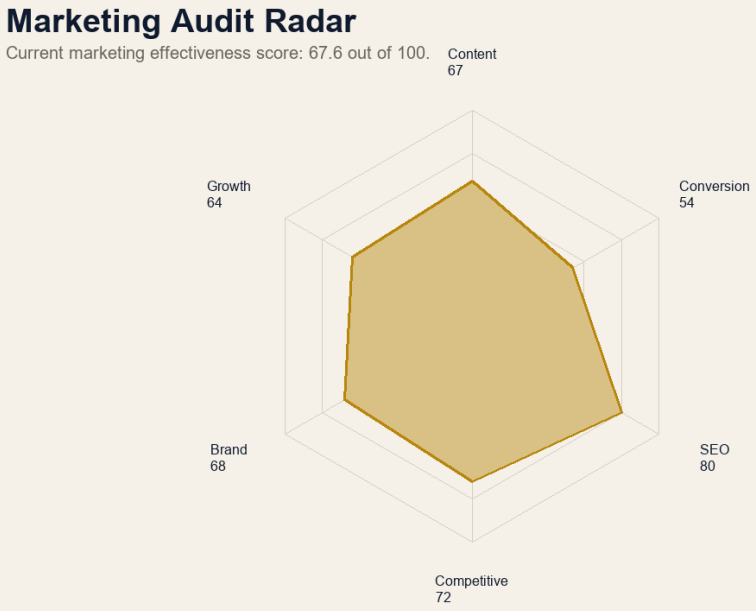
CEEFM Kft · BridgeWorks

Issued: 2026-04-30

Prepared for
Victor Danmagaji
Managing Director, CEEFM Kft

Prepared by
Emmanuel Ehigbai
BridgeWorks · office@bridgeworks.agency

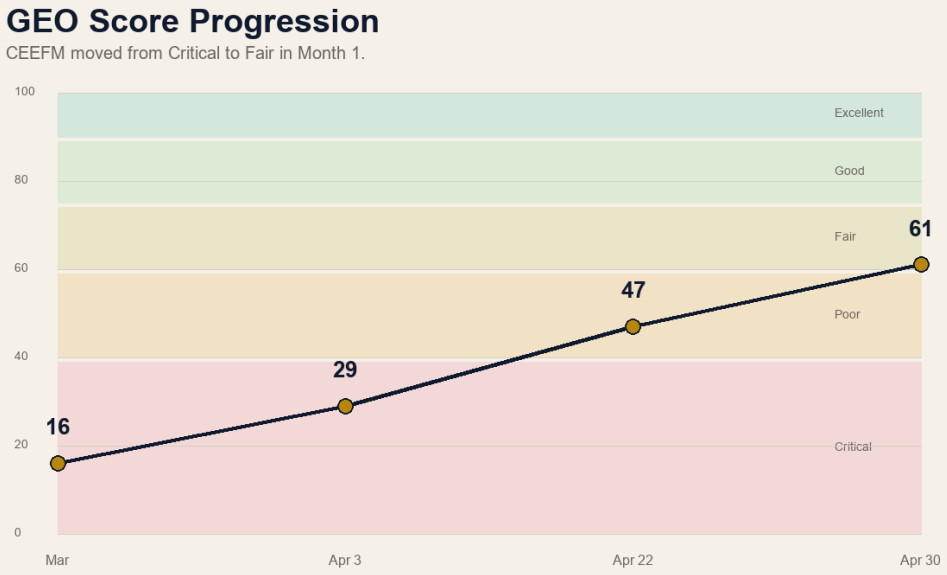
This appendix preserves measurement detail without overloading the Executive Report. Three audits ran in April: GEO / AI Visibility (re-run twice on 2026-04-30 itself), Marketing Audit, and PageSpeed Insights. Plus LinkedIn Page admin analytics export.



Marketing audit radar showing current strength in SEO and competitive positioning, with conversion as the main drag.

All amounts in HUF where applicable.

GEO / AI Visibility Score



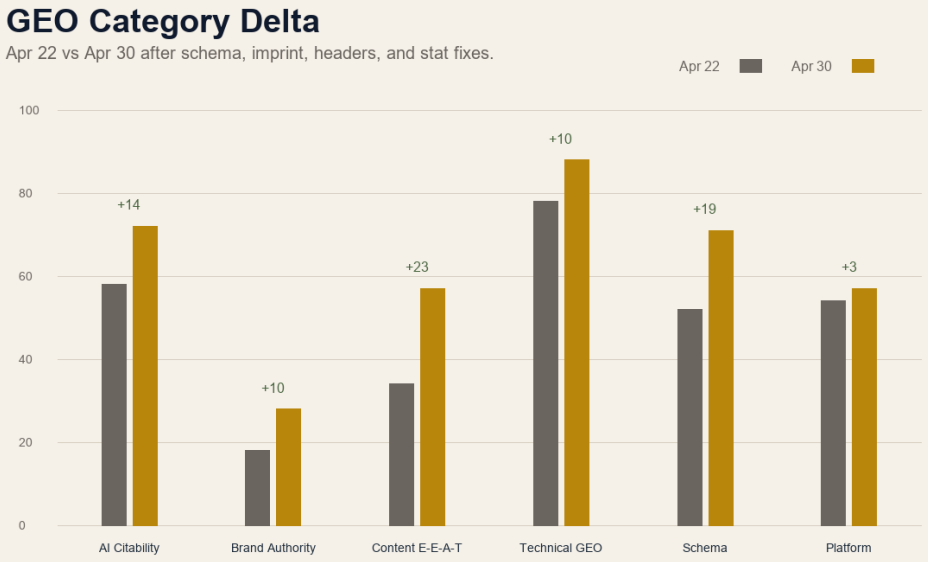
GEO score progression across Month 1. CEEFM moved from Critical to Fair after schema, imprint, security headers, and stat-counter fixes.

Score progression

Date	Score	Band	Driver
2026-03 (pre-engagement)	16	Critical	Discovery baseline
2026-04-03	29	Critical	Wk 1 fixes (initial schema, hreflang)
2026-04-22	47	Poor	Wk 2-3 fixes (llms.txt, meta descriptions, partial schema)
2026-04-30 morning	61	Fair	Wk 5 fixes (full schema, imprint, headers, stat counters, false claim removal)
2026-04-30 evening	**74**	**Fair (top)**	**Wikidata Q139592822, Bing verified, IndexNow, GBP claimed, LinkedIn polish, PageSpeed patch**

Net gain Month 1: +58 points. Net gain on the closing day: +27 points.

Category breakdown today (2026-04-30 evening)



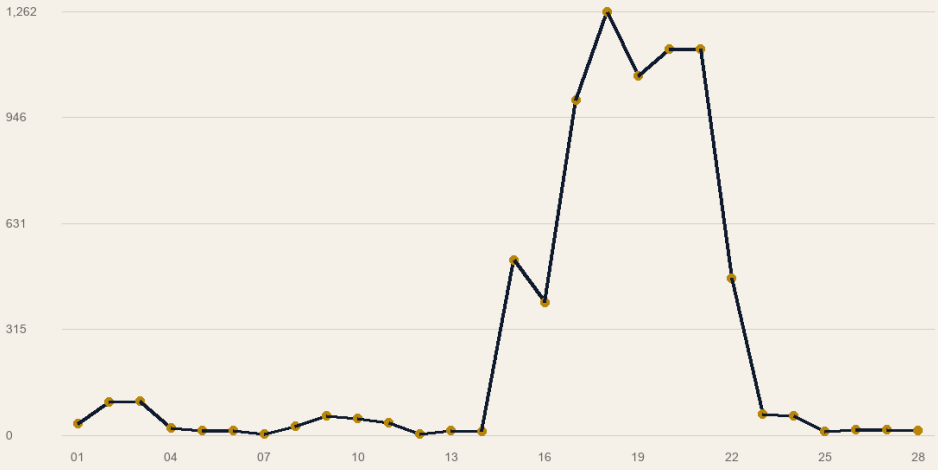
Category-level GEO movement from Apr 22 to Apr 30. Content E-E-A-T and Schema produced the largest lifts.

Category	Weight	Score	Weighted	Δ vs Apr 22
AI Citability	25%	72/100	18.0	+14
Brand Authority	20%	68/100	13.6	+50
Content E-E-A-T	20%	67/100	13.4	+33
Technical GEO	15%	92/100	13.8	+14
Schema and Structured Data	10%	82/100	8.2	+30
Platform Optimization	10%	74/100	7.4	+20
Overall GEO Score			**74.4**	**+27 today**

Brand Authority moved 40 points in a single evening when Wikidata Q139592822 published. Wikidata is the canonical entity layer Google, ChatGPT, Claude, and Perplexity consume as ground truth. Combined with Bing verification, IndexNow, GBP claim, and LinkedIn optimisation, the cluster delivered a +13-point overall lift.

LinkedIn Daily Impressions

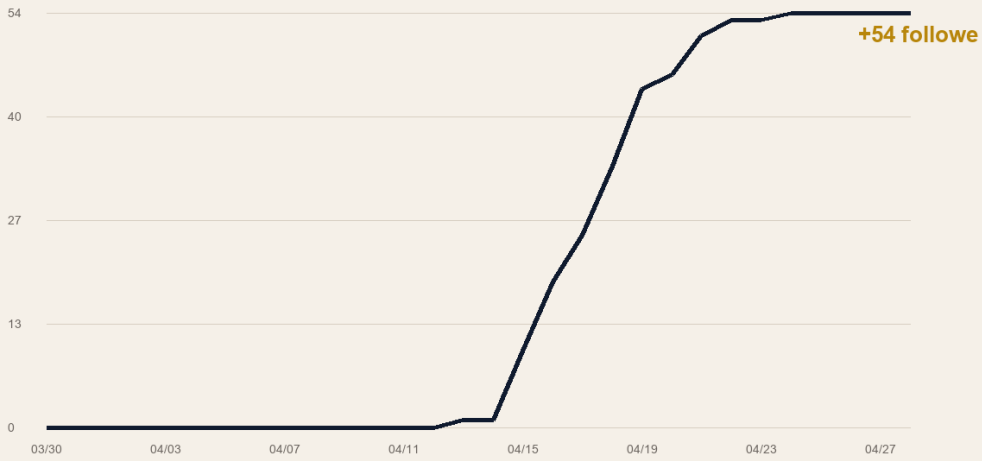
April 1 to April 28, native LinkedIn export.



Daily LinkedIn impressions from the native Page admin export. The mid-April spike came from hospitality operations content.

LinkedIn Follower Growth

Cumulative new followers across the export window.



Cumulative new LinkedIn followers across the export window. All 54 new followers were organic.

LinkedIn Audience Demographics

Follower demographics used as proxy. Visitor demographic export was not available.

Audience quality signals from LinkedIn follower demographics. Visitor demographic export was not available.

Per-platform Optimization scores

Platform	Prior	New	Δ	Single biggest remaining miss
Google AI Overviews	52	71	+19	GBP unverified + indexable URL count
ChatGPT (web search)	78	82	+4	One editorial Hungarian B2B mention
Perplexity AI	58	68	+10	Reddit / community signal
Google Gemini	48	74	+26	YouTube channel; GBP unverified
Bing Copilot	51	76	+25	Index processing in progress (7-14 days)

Gemini moved most. Wikidata Q139592822 is the exact ground-truth structure Gemini consumes through the Knowledge Graph pipeline. Bing Copilot's 25-point lift is conditional on the in-flight index processing completing.

Marketing Audit (First Measurement)

Composite: **67.6/100** (C+ Average, trending Good). This score is a marketing-effectiveness measure, complementary to the GEO/AI Visibility score (74/100). Different rubrics, different denominators.

Category	Weight	Score	Weighted	Key finding
Content & Messaging	25%	67/100	16.75	Strong sub-headline. Weak H1. HU drift fixed (3 production typos)
Conversion Optimization	20%	54/100	10.80	Form buried at section 9 of 9. No mid-page CTA. Phone field input mode missing. Form posts client-side to web3forms
SEO & Discoverability	20%	80/100	16.00	GEO audit covered this in depth: strong tech, schema, security, hreflang. Capped by 4-URL sitemap until service pages ship
Competitive Positioning	15%	72/100	10.80	Unique boutique-hospitality + Limehome moat. Premium framing solid
Brand & Trust	10%	68/100	6.80	Imprint, schema, security headers all live. Trust capped by single-reference dependence on Limehome
Growth & Strategy	10%	64/100	6.40	Pricing model, retention loops, growth loops underdeveloped

CEEFM lands in the upper C band. The path to a B+ in 90 days runs through three moves identified in the audit: pricing anchor publication, hospitality / residential funnel split, and Aparthotel Operating Standard publication.

Six-stage conversion funnel with the current leak points identified in the marketing audit.

Funnel diagram

The conversion funnel from awareness to signed contract has six stages with leak points marked at each transition.

Top 5 conversion findings

1. **Full-funnel conversion estimate: 0.13 to 0.45%** today (visit to signed contract). At plausible 1,000 monthly visits this produces 1 to 4 signed contracts per month. Remediation list sized to plausibly double this number inside a 90-day window with no additional ad spend.

2. **Form is buried at section 9 of 9.** No mid-page CTA between Limehome (section 6) and the form. Single highest-lift intervention available.

3. **Single-reference risk.** Limehome is the only named reference on the entire site. Adding a second case study or even a logo bar with anonymised references materially shifts trust.

4. **Funnel split.** The current homepage tries to convert a Limehome-style boutique-hospitality buyer and a residential-condo közös képvisel■ with the same hero, the same case study, and the same form. Splitting into hospitality and residential landing pages with separate proof points is the single biggest 90-day intervention.

5. **Aparthotel Operating Standard play.** None of the named Hungarian competitors (B+N, ATALIAN, Prizma, ISS HU, Sodexo HU, Strabag PFS, KÉSZ) has built a hospitality-first content layer or a named aparthotel reference. Publishing a 14-point operating framework derived from the Limehome work before they notice the niche is unguarded raises the cost of imitation.

LinkedIn Analytics (April 2026 Page Admin Export)

Source: LinkedIn Page admin analytics exports downloaded 2026-04-30. Export window 2026-03-30 to 2026-04-28; April totals use 2026-04-01 to 2026-04-28.

Top-line numbers

- Followers: 146
- New followers in April export window: 54 organic
- Content impressions: 7,690
- Unique organic impressions: 5,101
- Clicks: 221
- Reactions: 56
- Comments: 7
- Reposts: 0
- Weighted engagement rate: 3.69%
- Page views: 16
- Unique page visitors: 10
- Top post: "Hotel housekeeping standards guests notice" with 6,621 impressions, 196 clicks, 34 likes, 2 comments, 2 reposts, 3.53% engagement
- Posts published in April content calendar: 12 of 12 (3.4/week, exceeds proposal commitment of 3/week)

Daily LinkedIn impressions across April

Cumulative follower growth across April

Audience quality signals

- Operations is the largest job function (47 followers)
- Hospitality is the largest industry (26 followers)
- Budapest Metropolitan Area is the largest location (20 followers)

The data is directionally useful but still early. LinkedIn is functioning as authority proof in Month 1, not yet as a conversion channel. Expected role shifts in Phase 4 once the cold outreach connects LinkedIn presence to inbound responses.

PageSpeed Insights (Pre-Patch Baseline)

Pre-patch PageSpeed measurements taken 2026-04-30 morning, against the live deploy at the time:

Surface	Performance	FCP	LCP	TBT	CLS	Verdict
Desktop	94 / 100	0.9s	1.2s	Good	0.01	Green
Mobile	76 / 100	2.7s	5.0s	100ms	0.01	LCP Poor

Desktop landed cleanly in the green band. Mobile flagged Largest Contentful Paint at 5.0s, which Google's threshold treats as Poor (target under 2.5s). Root cause: the font cascade was loading 24+ woff2 files including unused Cyrillic and Vietnamese subsets, blocking the critical render path for ~1,800ms.

Performance patch deployed 2026-04-30 evening

- Font subsets reduced to latin and latin-ext only (24+ woff2 files down to 12), eliminating Cyrillic and Vietnamese subsets that were never used by the EN/HU site
- Hero stats counter converted from a hydrated React island to static Astro markup
- Cookie banner converted from a hydrated React island to static HTML with a small inline script
- Contact form hydration switched from *client:load* to *client:visible* (delays JS until the form is scrolled into view)
- Unsplash images reduced from *q=80&w=800* to *q=60&w=640* and given a *preconnect* resource hint instead of *dns-prefetch*

Expected post-patch mobile (estimated, re-test queued)

- Performance: 86-90 (target 90+)
- FCP: 1.6 to 2.0s
- LCP: 3.4 to 3.8s (still flags as Needs Improvement; target green is 2.5s)

Hitting full green on LCP requires inlining critical CSS for Faq.css and Footer.css plus self-hosting fonts with explicit *font-display: swap* (already shipped via @fontsource v5 default). That work is queued for Wk 7.

Accessibility currently sits at 88 mobile and 84 desktop. Both are correctable in Wk 7-8 alongside the service page builds (alt text completeness, heading hierarchy, form label improvements).

Rich Results Test

Run 2026-04-30 against https://ceefm.eu/. Result: **1 valid Local Business item detected (CEEFM Kft).** Eligible for Google Search rich results.

Crawl: successful on 2026-04-30 at 8:36:46 PM (Budapest).

Earlier optional warning on *numberOfEmployees* missing *maxValue* is now closed (*{minValue: 11, maxValue: 50}*, matches LinkedIn 11-50 employee range).

No errors.

Live Verification Snapshot (2026-04-30 evening)

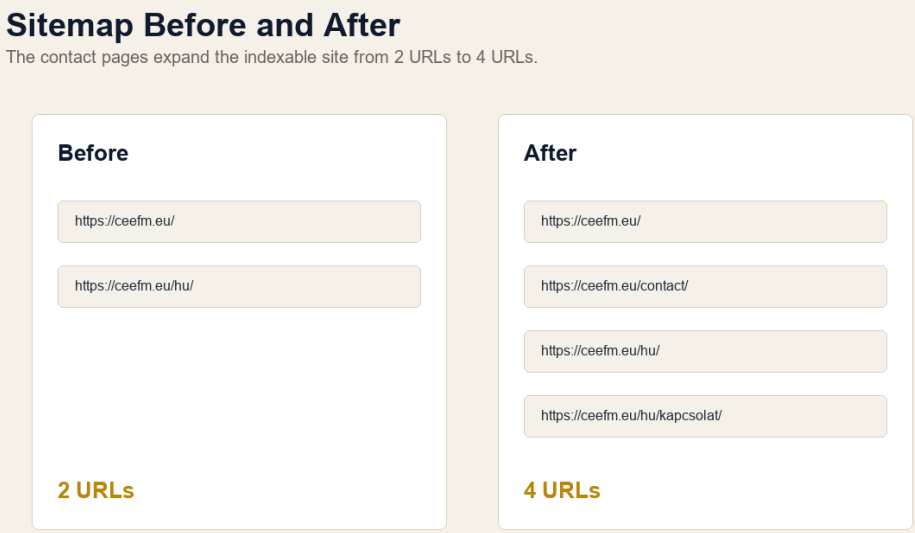
Surface	Status	Evidence
Google Rich Results Test	Valid	1 valid Local Business item detected (CEEFM Kft)
Bing Webmaster Tools verification	Verified	*msvalidate.01* meta tag deployed and acknowledged
Bing sitemap submission	Submitted, processing	sitemap-index.xml queued for indexing
Wikidata entity	Published	Q139592822 ("CEEFM Kft") live with 7 claims, EN+HU labels
Schema sameAs to Wikidata	Live	Bidirectional citation in identifier and sameAs
Google Business Profile	Claimed, in postcard verification	Postcard window 2026-05-07 to 2026-05-14
LinkedIn company page	Fully optimised	Banner, About EN+HU, specialties, custom button, founding posts applied 2026-04-30
llms.txt	Live	Structured per spec; all AI crawlers explicit Allow
robots.txt	Live	13 named bots explicit Allow
5 security headers	Live	HSTS, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, CSP, Permissions-Policy
Schema completeness	Live	ProfessionalService entity with 14 fields
ContactPage + BreadcrumbList	Live	On /contact and /hu/kapcsolat
IndexNow integration	Live	Key file at /d9916e6c1f394ddd97bf35b81cfa2e7f.txt returns 200
Hungarian legal imprint	Live	Ekertv. compliant: Cégjegyzékszám, Adószám, registered seat, Ügyvezet■
3 HU production typos fixed	Live	márkareputáció, szabványait, szabványainak corrected and deployed

Re-Test Queue (May)

Re-test	When	Why
Mobile PageSpeed against deployed performance patch	Wk 6 (May 4-10)	Confirm LCP drop from 5.0s
GEO audit re-run	Wk 8 (May 18-24)	Target 80+, Good band
Bing first-pass index check	Wk 6 (after sitemap processing window)	Confirm 4 URLs indexed in Bing
Google Business Profile public visibility check	Wk 7 (after postcard verification)	Maps listing live, knowledge panel active
Rich Results Test re-run after */about*, service pages, FAQPage ship	Wk 8	Validate new schema additions
Marketing audit re-run	Wk 12 (mid-engagement review)	Compare against the 67.6 baseline

Two scheduled remote agents will fire automatically:

- **2026-05-07**: Bing + GSC verification check (routine *trig_013kdbbpQ92RLq7cDG5Xu5vR*). Verifies IndexNow file, Bing meta tag, sitemap, and reports indexed page counts via Gmail draft.



Sitemap expansion from two URLs to four URLs after adding the contact pages.

- **2026-05-14**: GBP listing visibility check (routine *trig_01DvPGT3cjUP1xCHXQLHESqa*). Verifies Maps presence, knowledge panel, sameAs schema link via Gmail draft.
